

This CPD seminar entitles you to 1 formal CPD point. Please be aware you are required to manage your own CPD records. We will provide you with your participation certificate and answer sheet once you have attended the full seminar.

## SPECIFYING HARDWOODS WITH CONFIDENCE

Proudly supported by

1. What document will provide detailed information that relates to determining the environmental impact of the US hardwood material selected and from where can it be obtained?
2. What are 3 key differences between the American and Australian hardwood resource?
3. Define the process of thermal modification of hardwoods and outline its benefits for application in Australia
4. What is the risk of American hardwoods being illegally harvested and, therefore, not meeting the requirements of the Australian Illegal Logging Prohibition Amendment Regulation (AUSILPAR)?
5. What is the key different between softwood and hardwood cross laminated timber (CLT)?
6. How do you determine the suitability of an American hardwood species for flooring?
7. How do you differentiate between American white and American red oak, particularly when in Australia the term 'American oak' is often used

**At the end of this panel, attendees will be able to:**

- a) Assess and integrate construction systems and materials consistent with the project brief
- b) Evaluate design options against values of physical, environmental and cultural contexts
- c) Apply creative imagination and aesthetic judgement to produce coherent design
- d) Investigate and integrate appropriate material selection for the project design
